No. 2017/Trans. Cell/MR Dash Board/Ramp-up

Dated: 29.12.2017

**General Manager
All Production Units
Indian Railways**

Sub: Evaluate all manufacturing facilities for Make vs. Buy and Economies of Scale.

Ref: MR's Dashboard Item

Hon'ble MR held a meeting with Transformation Cell on 12th December 2017. During the meeting, he emphasized the need for improving transport output by 3-times during next 05 years i.e. by 2022. This was also emphasized at the Conclave "Sampark – Samanway – Samvad" held on 16th December 2017 at Delhi.

It is needless to say that output of our Production Units has to increase substantially during this period to match the growth expectations. There is, therefore, an urgent need for evaluating the performance of manufacturing facilities to assess their capability to ramp up production by almost 3-times the present level with the existing workforce.

Any successful production ramp up programme should inter-alia facilitate decisions that lead to best usage of time, financial and human resources. PUs shall have to come out with a workable plan by making suitable changes to existing processes, improving productivity, induction of new technology and machinery & plants, introduction of 3-shift working or working out a judicious mix of make or buy matrix.

It is therefore, imperative that the Production units of the Indian Railways embark upon the journey of 3X ramp-up with a clear strategy.

You are requested to formulate a "Production Ramp-up" road map with absolute clarity of resources required with cost & time line and communicate to Board latest by **31st January, 2018**. Details may be mailed at edme.trans@gmail.com
