रेलवेबोर्ड Railway Board

No. 2017/M(N)/570/82 Pt. (E.No. 3321409)

New Delhi, dated 15.02.2023

Principal Chief Mechanical Engineers

All Zonal Railways

**Sub: Process Audit of In-motion Weighbridges over Indian Railways**

Ref: (i) Board's letter of even no. dt. 05.03.2021

(ii) Board's letter of even no. dt. 25.03.2022

(iii) Interim Quality Audit report submitted by QCI in September 2022 (copy enclosed)

Please refer to letter under reference (i) wherein it was advised that Ministry of Railways have awarded the work of 'process Audit of in-motion Weighbridges over Indian Railways' to M/s Quality Council of India (QCI) as per the terms and conditions mentioned in letter of even no. Date 30.03.2021.

Vide reference (iii) the interim Quality Audit report has been submitted by QCI. following deficiencies w.r.t. **Railway owned EIMWBs** have been advised by QCI in the Interim report :

SN	Parameter	Issue raised by QCI
1.	Overseeing of the Weighbridges operation by private officials	At 05 location viz. SBG/MLDT/ER, PKR/HWH/ER, BHW/MLDT/ER, VYN/LKO/NR & DVM/KGP/SER private official oversee the operation.
2.	Unavailability of FOIS Integration	At 14 locations, FOIS integration was not available. (CR - 01, ECoR- 01, NFR-02, NR-01, NWR- 01, SCR- 03, SR -02, WCR-03)
3.	Invalid Calibration Certificate	At 04 locations viz. New Guwahati shed/LMG/NFR, TKD/DLI/NR, Jaisalmer /JU/NWR & Royapuram/MAS/SR, Calibration Certification was invalid.
4.	Unavailability of CCTV Camera	CCTV was not available at 42 locations. Also, at 08 locations it was not in working condition (CR-03, ECoR-08, ECR-13, ER-03, NCR-03, SCR-05, SER-02, SR-02, WCR-03)
5.	Unavailability of Air Conditioner	At 25 location AC was not available
6.	Unavailability of Maintenance contract	At 31 locations, warranty/maintenance contract was not available
7.	Non Performing of Weighbridge Inspection	At 17 locations monthly/Quarterly/Half yearly/Yearly inspection was not carried out. ( CR-01, ECoR - 02, ECR - 02, ER-01, NFR-03, SCR-02, SECR-02, SER-02, WR-02)
8.	Non-Sealing and Non-Stamping of Junction box	At 21 locations, the junction box was not sealed (ECR-01, ER-01, NFR-01, NR-01, SCR-01, SECR-07, SER-01, SR-03, SWR-01, WCR-03, WR-01)  At 120 locations, the junction box was sealed and at 46 locations, it was stamped.

9	<b>Non-Sealing and Non-Stamping of Digitizer</b>	At Maruada/Raipur Division/SECR, the digitizer was not sealed. At 40 locations, the digitizer was sealed and at 146 locations, the digitizer was stamped.
10	<b>Non-Disabling of external port</b>	At 107 locations, the external port was not disabled.
11	<b>Allowing of Manual intervention in OEM Software</b>	At 05 locations, viz Bma/BSL/CR, Bhugaon/NGP/CR, Simhachalam (line no. 7)/WAT/ECOR, Rangapani/KIR/NFR and Halvad/ADI/WR, manual intervention in OEM Software was allowed.
12	<b>Allowing of Manual intervention in FOIS</b>	At 49 locations, manual intervention in FOIS is allowed.
13	<b>Unavailability of Visitors' log</b>	Visitors log was available only at 67 locations
14	<b>Involvement of other than 'Commercial, weighbridge operator &amp; Traffic control' Official for manual editing</b>	At 132 Railway locations other than "commercial, weighbridge operator & Traffic control " were involved in process of manual editing.

The excel sheet having the above details provided by QCI is enclosed for ready reference. It is requested to arrange to take necessary action in the matter under advice to this office by 10.03.2023.

DA: as above

## QCI: Process Audit of Electronic In-Motion Weighbridges of Indian Railways

1 message

**keshav gera** <keshav.g@qcin.org>

2 September 2022 at 13:28

To: Railway Board Mech Frt Dte Mechanical Wagon Section <mnbranch312@gmail.com>

Dear Sir,

Please find attached the updated interim report of the project "Process Audit of Electronic In-Motion Weighbridges of Indian Railways" ready for your kind reference along with annexures.

Kindly let us know if you require any further information.

**Warm Regards,**

**Keshav Gera**

**Project Planning & Implementation Division**

**Quality Council of India**

## 1. INTRODUCTION

In a country with a population of 1.39 billion, Indian Railways plays a crucial role in the social and economic development of the nation by running the world's fourth-largest rail network in the world. It is spread over a route of 1.23 lakhs km, ferrying nearly 23 million passengers per day in over 13,523 passenger trains: 4 million tonnes (MT) of freight daily from 9,146 freight trains. It is also one of the largest employers in the world with a workforce of nearly 1.2 million employees.

Apart from being an energy efficient and economic mode of conveyance and transport, the railway network is also ideal for long-distance travel and movement of bulk commodities.

### 1.1. WEIGHBRIDGE BACKGROUND

Rail freight is calculated on the basis of actual weight being transported in the wagons and the weight is determined at the dedicated weighment places commonly known as Weighbridges. A weighbridge is a system installed at dedicated places along the railway lines to measure the weight of loaded trains and load the pre-weighed commodity in wagons, which further helps in deciding the price of the freight of the goods being carried by train. These weighbridges form the backbone of Indian Railways' financial recovery as all goods carrying trains have to be weighed at these weighbridges.

In India, two types of weighbridges are in use:

1. Electronic In-Motion Weighbridge (EIMWBs)
2. Pre-Weigh Bins

## 2. OBJECTIVE

To strengthen the system and improve transparency, Ministry of Railways planned to instil quality checks by conducting periodic process audits at the EIMWBs (Electronic In-Motion Weighbridges) deployed across locations in India.

The objective behind carrying out an extensive process audit was to:

- Check the different process that are being followed at the weighbridge premises
- Check the calibration and maintenance status of different equipment/machines used at weighbridges
- Identify the different documents that are maintained at different sidings
- Optimize the weighbridge operation

Ministry of Railways mandated Quality Council of India (QCI) to do this audit. QCI with its different boards and trained professionals carried out the audit to understand the on-ground process.

### 3. ABOUT QUALITY COUNCIL OF INDIA

Quality Council of India (QCI) was initiated jointly by the Government of India and the Indian Industry represented by the three premier industry associations i.e., Associated Chambers of Commerce and Industry of India (ASSOCHAM), Confederation of Indian Industry (CII) and Federation of Indian Chambers of Commerce and Industry (FICCI). QCI was set up to establish and operate national accreditation structure and promote quality through National Quality Campaign.

The council plays a pivotal role at the national level in propagating, adoption and adherence to quality standards in all important spheres of activities including education, healthcare, environment protection, governance, social sectors, infrastructure sector and such other areas of organized activities that have significant bearing in improving the quality of life and wellbeing of the citizens of India.

QCI has been conducting assessments and testing of the quality parameters in various projects of Government of India as in Swachh Bharat Mission (SBM)-Open Defecation Free, Google Toilet Locator, Third Party Assessment of Coal, Government e-Market Place (GeM), NHAI and many more. To make these assessments, QCI has been utilising its national boards who are accrediting Institutions, testing laboratories, certification bodies, hospitals etc. on International Standards.

#### QCI Boards

QCI coordinates its activities through five constituent Boards briefed below:

- **NABCB** - For Independent Third-Party Sampling, Testing and Analysis, QCI has National Accreditation Board for Certification Bodies (NABCB) which is providing accreditation to Inspection bodies as per the International Standard ISO/IEC 17020 in various industrial sectors.
- **NABL**- QCI has been utilising its another pillar i.e., National Accreditation Board for Testing and Calibration Laboratories (NABL) which is accreditation services to laboratories pan India in various fields of testing in accordance with ISO/IEC 17025, which is gold standard in the country.
- **NABET** – The board began life as the National Accreditation Board for Education and Training (NABET), which was set up in response to the emerging challenges in the conformity assessment arena with the mandate to establish and monitor the training and auditor's registration process.
- **NABH** - National Accreditation Board for Hospitals & Healthcare Providers (NABH) operates accreditation programme for healthcare organisations.
- **NBQP** - The National Board for Quality Promotion, a constituent board of Quality Council of India works on the Vision of promoting quality of life for the Citizens of India. The board is supported through nominal Plan Funds from the DPIIT (Department for Promotion of Industry & Internal Trade), Ministry of Commerce & Industry to carry out the National Quality Campaign.

## 4. METHODOLOGY

To understand the on-ground process of EIMWB, we did a thorough research, from drafting the questionnaire to the weightment process and officials involved in the functioning of the weighbridge. The key elements of the audit process were as follows:

**4.1. QUESTIONNAIRE DEVELOPMENT:** To improve the understanding and develop the detailed questionnaire on the working of Electronic In-Motion Weighbridges, thorough research was done. Based on the research from field and discussion with industry experts, course corrective measures were taken, and a final questionnaire was prepared.

After gathering all the required data, a final questionnaire was prepared (The questionnaire is annexed as [Annexure-I](#)). The following data was captured in the audit for the survey:

- End to End process involved at the weighbridge
- Software(s) involved
- Human intervention at various stages
- Record keeping and data monitoring
- Various stakeholders and their roles and responsibilities
- To record roles and responsibilities of each stakeholder in the process

A technology tool (Mobile Application and Web tool) was prepared for conducting the audit. This special application had the facility to geo-tag all the photographs and send them to the central management team in real time.

## 4.2. ON GROUND EXECUTION

- To test the questionnaire and audit-application, pilot was carried out at 14 locations of 3 states.
- Experienced assessors were selected based on their relevant experience in the field of assessment and scale of operations. Additionally, they were selected after various test rounds. Based on the pilot study, detailed training programmes were conducted for the selected assessors.
- Selected assessors were deployed on the field to carry out the process audit of all the EIMWBs. The following process was followed by the assessors:
  - Captured responses to the questions
  - Wherever applicable in the questionnaire, attached geo-tagged photographs of:
    - i. Documents (calibration certificate, maintenance contract, etc)
    - ii. Infrastructure (lighting, CCTV, air conditioner, etc)
    - iii. Security Personnel (wherever available)
- All the responses were submitted in real time through mobile based application

**4.3. QUALITY MONITORING:** A rigorous 6-layered analysis was conducted of collected data to ensure the authenticity of data at Delhi office:

- For every team of selected assessors, a QCI shadow coordinator was appointed to authenticate and supervise the audit process.
- A 24\*7 quality check room was set up at QCI Delhi office; the quality check team ensured quality responses of each and every data point as prescribed in the questionnaire.
- Data cleaning process of submitted responses were carried out to identify the deviations, if any.
- Re-assessment of EIMWB was also carried out to rectify deviations and to verify the authenticity of the documents.
- A detailed analysis of the gathered data was done to prepare the outcome of process audit.
- Live weighment of rakes was monitored wherever it was possible. It helped to practically verify entire weighment process.

## 5. ANALYSIS

QCI carried out a detailed analysis of the entire functioning of the EIMWBs and to compare the variation in process at various locations (railways and private owned). Through the course of audit at 629 locations, QCI analysed the following:

### 5.1. OWNERSHIP

**5.1.1. WEIGHBRIDGE OWNERSHIP-** Electronic In-Motion Weighbridges are categorised in two different categories i.e., Railway owned and Private owned. Indian Railways has mandated to deploy railway official at both categories of weighbridges:

- 187 Railways owned EIMWBs
- 442 Private owned EIMWBs

The details of all the EIMWBs are attached in [Annexure-II](#).

**5.1.2. OEM OWNERSHIP-** Indian Railways has a list of 8 approved Original Equipment Manufacturers (OEM) to install EIMWB at railway sidings. As per audit, we found the total figures of 8 different OEMs that are installed at 629 locations:

Name of OEMs	Railways	Private	Total
M/s Rice Lake Weighing Systems India Ltd.	51	147	198
M/s Digital Weighing Systems(P) Ltd.	61	103	164
M/s Essae Digitronics (P) Ltd.	32	86	118
M/s Avery India Ltd.	10	26	36
M/s Pragati Instrumentation Pvt. Ltd.	18	26	44
M/s Weightrack India Pvt. Ltd.	0	23	23
M/s Merit BMH Engineering Pvt. Ltd.	9	16	25
M/s Schenck Process India Ltd.	6	15	21
<b>Total</b>	<b>187</b>	<b>442</b>	<b>629</b>

Table1.1- Total figures of OEMs

**5.1.3. WEIGHBRIDGE OPERATIONS** – During the audit at 629 locations, we identified the officials who are involved in the operations that happen at the weighbridge premises.

- **Railways-** Out of 187 locations, at 182 locations railway officials and at 5 locations, private officials oversee the operations.
- **Private-** Out of the 442 locations, at 313 locations private officials and at 66 locations railway officials oversee the operations. However, at 63 locations, both railway and private officials were there, and both the officials oversee the operations.

The following are the number of locations providing the same information (all other details are attached in [Annexure-II](#)):

Weighbridge Operator	Railway Locations	Private Locations
Railway Official	182	66
Private Official	5	313
Both	0	63

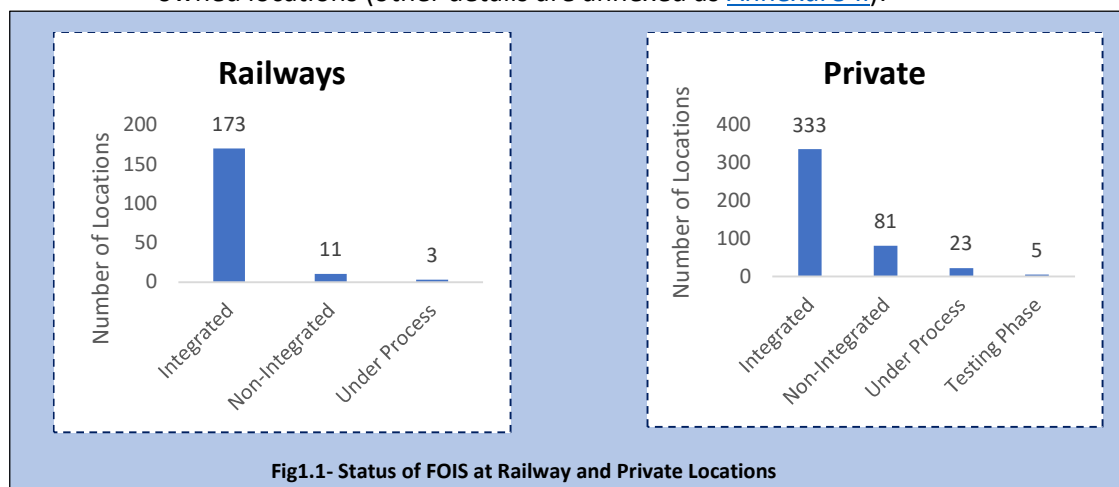

Table 1.2- Officials involved in weighbridge operations

## 5.2. FOIS INTEGRATION

As mentioned above, Indian Railways has a pre-approved list of 8 private Original Equipment Manufacturer (OEM) to procure and install weighbridge. The data from the OEM software is transferred to the FOIS software. FOIS (Freight Operations Information System) is a management system (MIS) used in Indian Railways for its freight business. There are two types of cases while transferring data from OEM to FOIS:

1. When OEM and FOIS are integrated, then weighment data is transferred without any human intervention. The only manual intervention is the approval of weighment data by operator which is sent to the FOIS for RR generation.
2. However, in case, OEM and FOIS are not integrated, the weighbridge operator prints the weighment slip from the OEM software and sends it to Commercial Goods Department. Commercial Official manually uploads the data in the FOIS software which may lead to typographical error. The data are cross-checked periodically at the station and the division office with RR and software printouts.
  - **Railways:** Out of 187 locations;
    - Integrated with FOIS at 173 locations
    - Non-Integrated at 11 locations
    - Under Process at 3 locations
  - **Private:** Out of 442 locations;
    - Integrated with FOIS at 333 locations
    - Non-Integrated at 81 locations
    - Under Process at 23 locations
    - Testing Phase at 5 locations

The following graphs showcase the status of FOIS integration at railway and private owned locations (other details are annexed as [Annexure-II](#)):

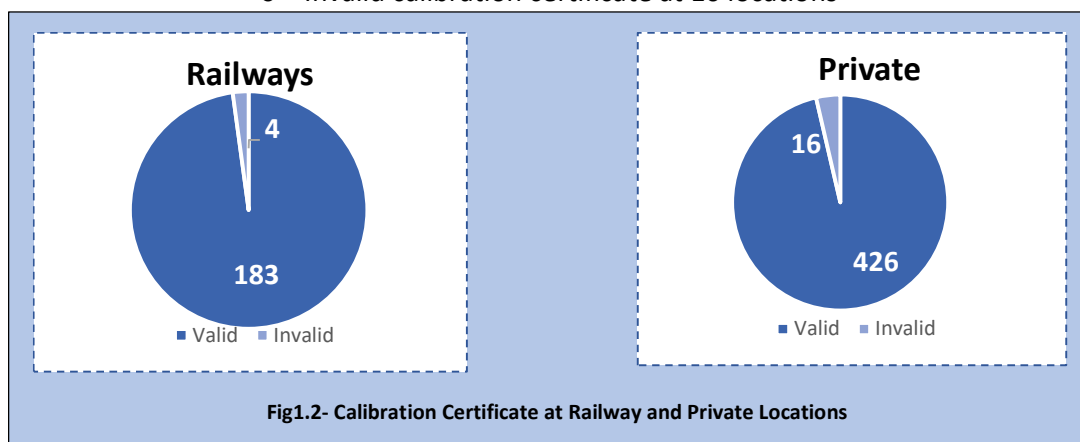

### 5.3. GENERAL AUDIT

The audit was conducted based on several parameters while it was differentiated majorly between Railway and Private owned locations. The following parameters were checked while assessing the general and infrastructural conditions: calibration certificate, CCTV, air conditioner, etc.

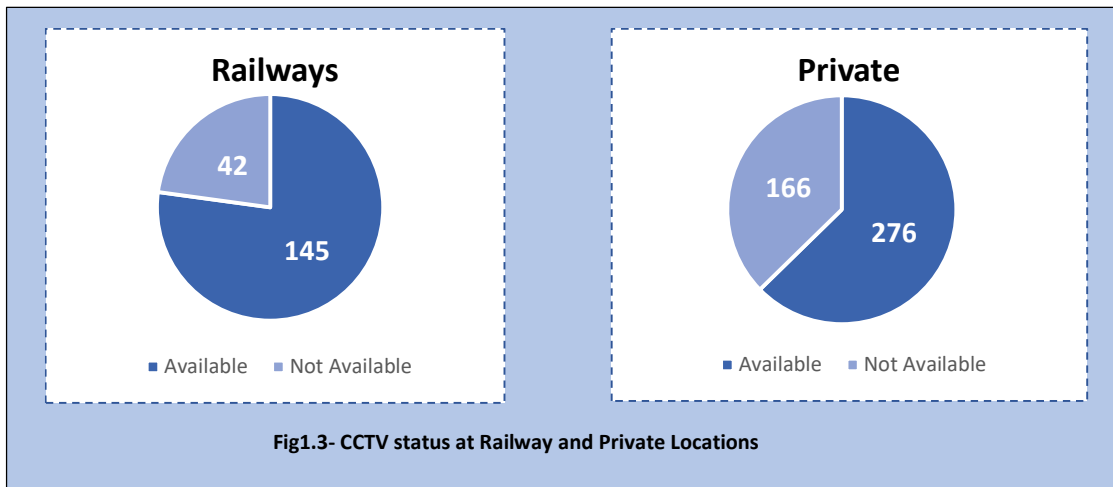

**5.3.1. CALIBRATION CERTIFICATE-** The calibration certificate provides valuable information on the quality and measurement accuracy of the EIMWB. During the audit, we checked the validity of calibration certificate provided by States weights and measures department. The calibration certificates that were valid on the date of inspection, were considered valid. All details are annexed as [Annexure-II](#).

- **Railways:** Out of 187 locations;
  - Valid calibration certificate at 183 locations
  - Invalid calibration certificate at 4 locations
- **Private:** Out of 442 locations;
  - Valid calibration certificate at 426 locations
  - Invalid calibration certificate at 16 locations

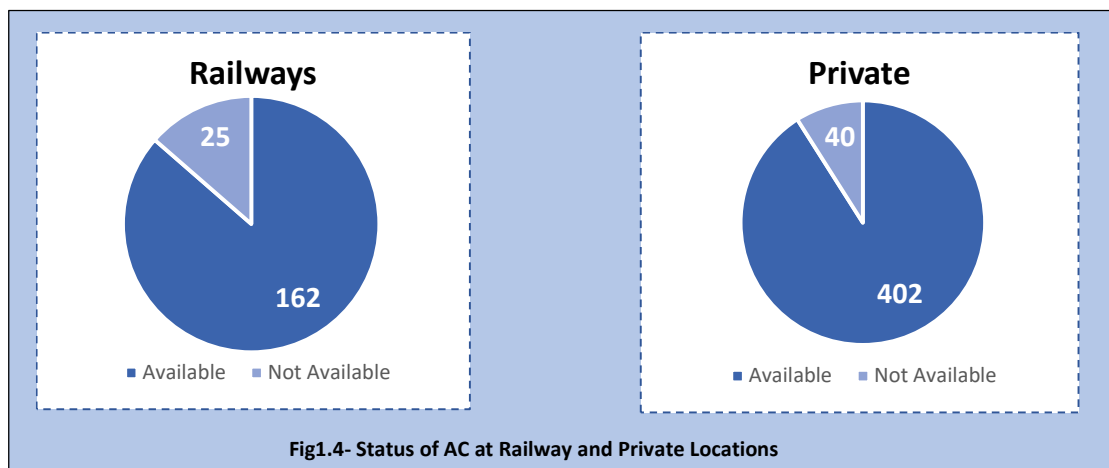

**5.3.2. CCTV-** Availability of CCTV helps in tracking (movement, safekeeping of records, etc.) at weighbridge premises, during the audit we found the following (All details are annexed as [Annexure-II](#)):

- **Railways:** Out of 187 locations;
  - CCTV was available at 145 locations out of which 137 CCTVs are in working condition
  - CCTV was not available at 42 locations
- **Private:** Out of 442 locations;
  - CCTV was available at 276 locations out of which 230 CCTVs are in working condition
  - CCTV was not available at 166 locations

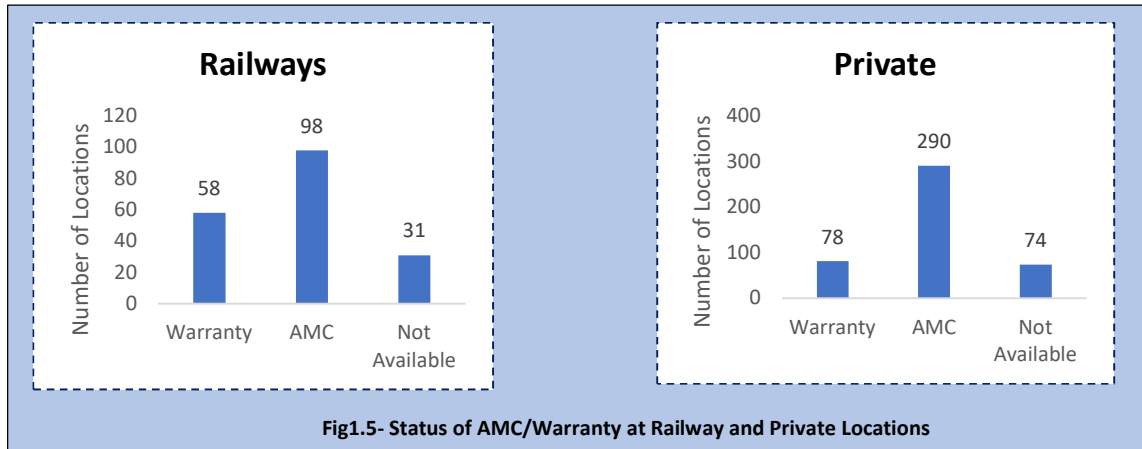

**5.3.3. AIR CONDITIONER-** While assessing the infrastructural conditions, we also checked for the availability of an air conditioner or an evaporative cooler.

- **Railways:** Out of 187 locations;
  - AC was available at 162 locations
- **Private:** Out of 442 locations;
  - AC was available at 402 locations

**5.3.4. MAINTENANCE-** A warranty/ maintenance contract is a support provided by the OEM to ensure that the machine continues to function as per standards. If any problem that hinders the working of the EIMWB occurs then OEM officials are contacted to rectify the issue. Therefore, having a valid maintenance contract is essential in case EIMWB encounters any defect. There was no valid maintenance contract/warranty at 31 railway locations and 74 private locations.

**5.3.5. FREQUENCY OF INSPECTIONS** – As per the guidelines issued by Railway Board, the following frequency of inspections was checked at EIMWBs during the audit that was conducted:

- Annually
- Half Yearly
- Quarterly
- Monthly

All details of locations are attached in [Annexure-II](#).

**5.3.6. CONDITION OF TRACK** - During the audit, we checked the condition of track switches and load cells. The load cells and track switches should be cleaned regularly to get the correct data. If there is little to no dirt/mud on the track switches and load cells, it is considered clean.

- At 95% railway locations, load cells and track switches were clean.
- At 93% private locations, load cells and track switches were clean.

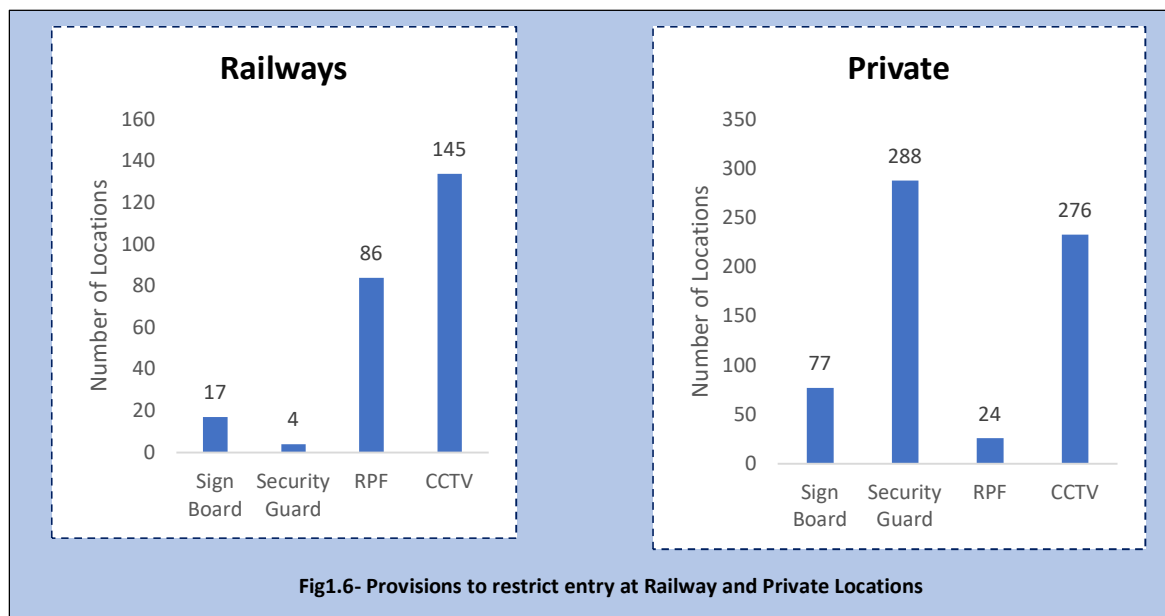

This indicates that at all these locations, the condition of track was satisfactory. All details are annexed as [Annexure-II](#).

## 5.4. SECURITY

All the EIMWB's infrastructure and important data related to the weighment of rakes should be placed within a secure premises.

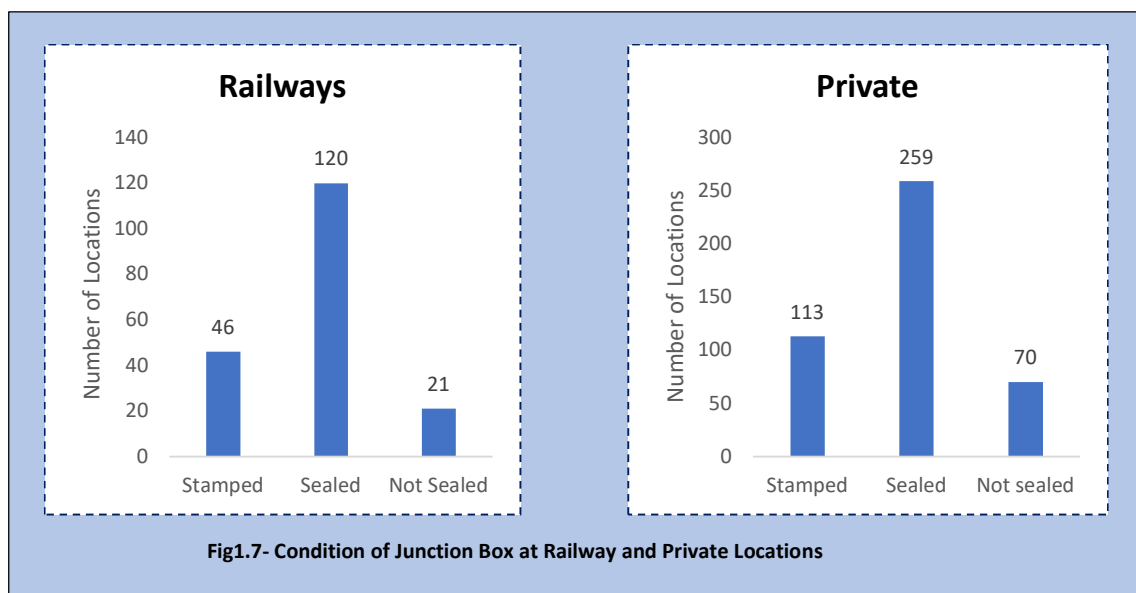

**5.4.1. OPERATIONS SURVEILLANCE-** The operations inside the weighbridge premises should be carried out in the presence of authorised surveillance. During the audit, we checked the following authorised personnel/provisions:

- Sign Board
- Security Guard
- Railway Protection Force
- CCTV

**5.4.2. JUNCTION BOX-** A junction box is a machine that transfers the data received from load cells and track-switches to the OEM software. Since the junction box is placed in the open, in order to ensure the safety and accuracy of data (All details are annexed as [Annexure-II](#)):

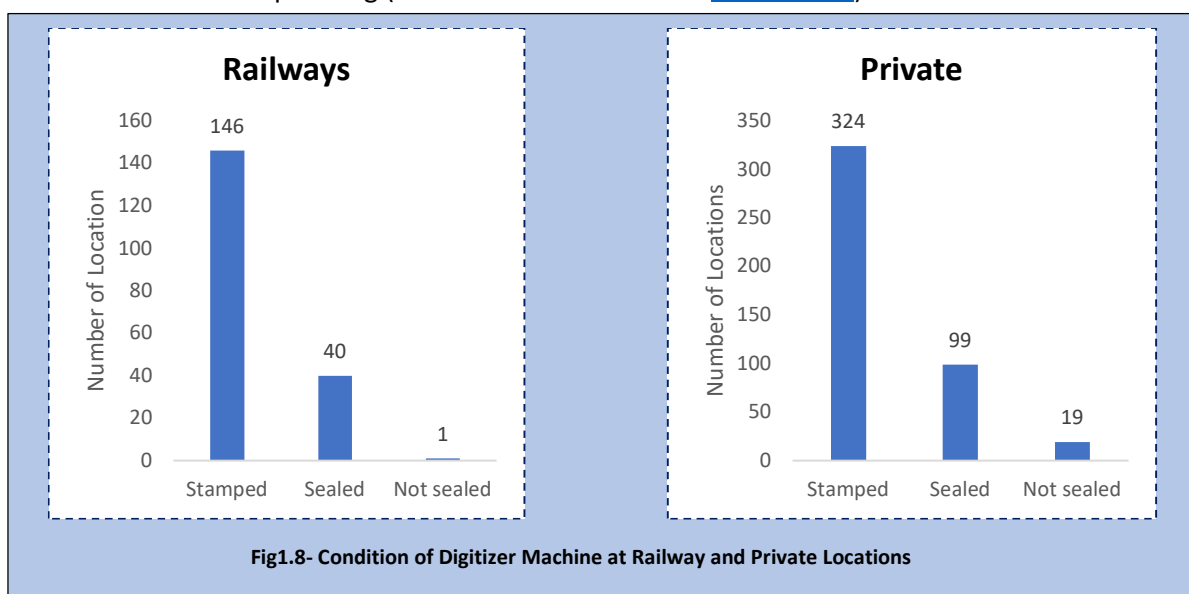

- After calibration, the machine is sealed and stamped
- Machine is considered sealed in two cases. There are two types of seal: paper seal and wire seal
- Machine is considered stamped if it has a paper seal signed by the concerned officials
- The machine should be kept in the same condition to ensure tamper-proofing

**5.4.3. DIGITIZER MACHINE-** A digitizer machine is one of the most important machines of an EIMWB. The load cells and track switches transfer the information (weight, no. of wagons and speed of the rake) to the digitizer through junction box. At railway location, Maruada (MXA), the digitizer machine was not sealed.

In order to ensure the safety and accuracy of data:

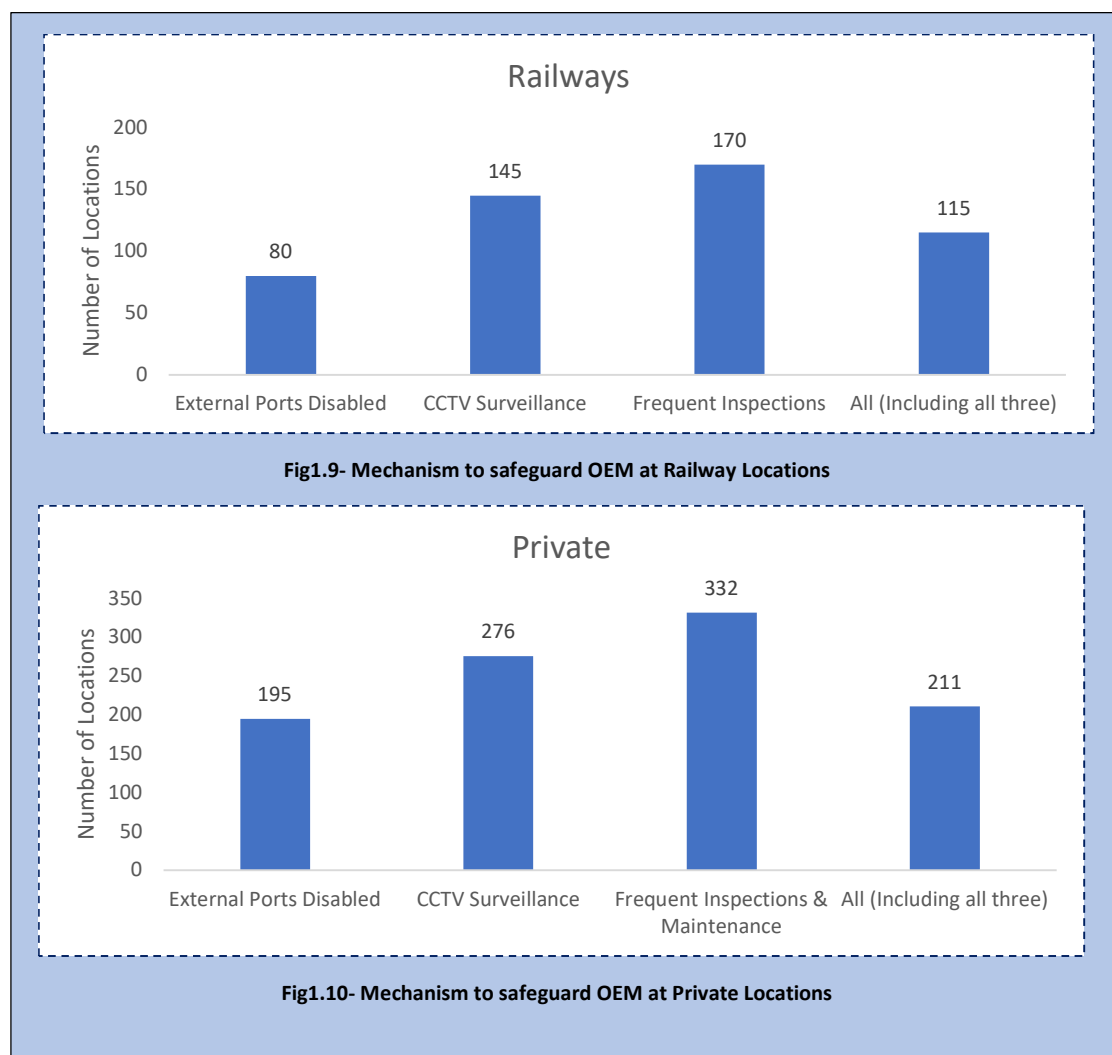

- After the calibration, the machine is sealed and stamped
- Machine is considered in two cases. There are two types of seal: paper seal and wire seal
- Machine is considered stamped if it has a paper seal signed by the concerned officials
- The machine should be kept in the same condition to ensure tamper-proofing (All details are annexed as [Annexure-II](#))

**5.4.4. MECHANISM TO SAFEGUARD OEM SOFTWARE** - OEM software is used to record the data coming from the junction box, which is then further sent to the FOIS software. Data recorded in the OEM software: speed, weight, carrying capacity, etc. This data should be in a safe and secured manner. During the audit, we checked the mechanisms which prevent any transfer of data. The following points were checked:

- External ports are disabled in order to prevent transfer of data (All details are attached in [Annexure-II](#))
- Machines are sealed and stamped
- Availability of CCTV for surveillance of operations
- Frequent inspections/maintenance visits by railway and OEM officials
- Or including all of the above points

However, there were 11 railway locations and 34 private locations where none of the above-mentioned safeguard mechanisms were present.

## 5.5. DOCUMENTATION

All locations should maintain a standard set of documents of all the processes. During the audit we found that following set of documents are maintained at some of the locations:

- Inspection/Audit Record by Senior Officials – The reports of all the inspections that are conducted at the weighbridge, in the presence of Railway Division Officials.
- Breakdown Record- In case a breakdown happens, it is reported, and its record is maintained.
- System Failure Record- Like the breakdown record, a system failure record is also maintained.
- Weighment Record/Rake Log- Daily weighment record is maintained for in/out process of the rakes.
- Overloading/ off-loading Record- The weighbridge officials maintain overloading/off-loading record.
- Maintenance Record of OEM- Maintenance inspections conducted as per the maintenance contract and warranty.
- Visitor's Log- Details of people visiting the weighbridge premises.

Table 1.3 has the list of records that are maintained at both railway and private owned locations.

Records	Railway Locations	Private Locations
Breakdown/Failure Record	175	331
Visitors Log	67	158
Inspection /Audit Record	170	332
Weighment Record	178	386
Maintenance Record	162	318
Rake Logbook	130	287

Table 1.3 – Records that are maintained at both locations

## 5.6. OPERATIONS

QCI took a comprehensive approach to check the various operations that happen at the weighbridge premises. These operations include the initial process, weighment process, and post-weighment process. Some of the process (overloading, off-loading, manual editing, etc) are mentioned below:

### 5.6.1. OVERLOADING

Indian Railways has set the carrying capacity of wagon that is allowed to run over the tracks. It is mandated to keep the wagons under the limit as overweight wagons may affect the railways infrastructure (tracks, bridges, wagons, etc.)

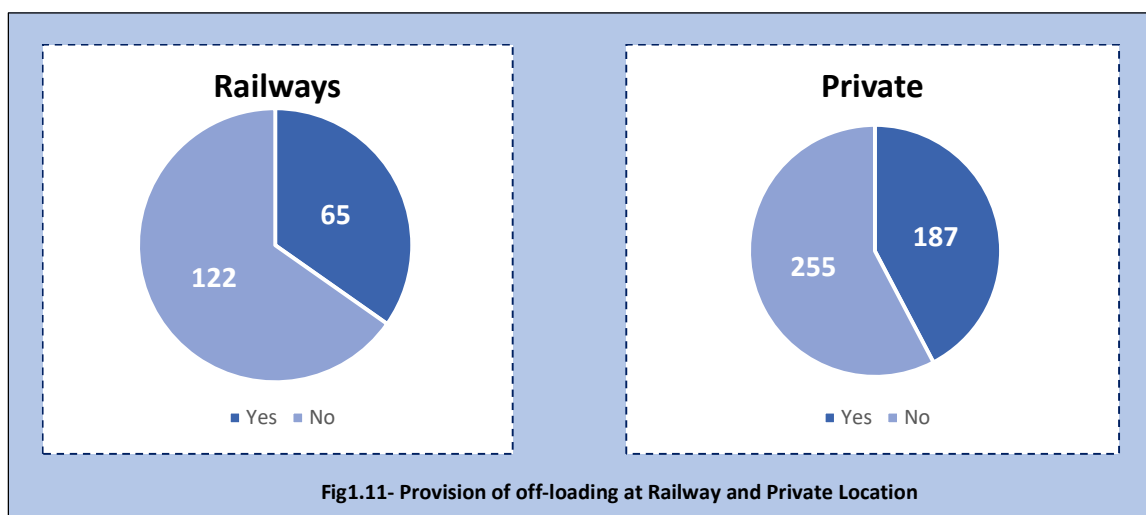

adversely. Apart from this, IR has also set a permissible carrying capacity (PCC) depending upon the make of the wagon.

**OFF-LOADING** – As per the process, excess weight is manually off-loaded from the wagons and certified by the railway officials. Off-loading is an official process which is carried out in case of overloading. We identified that 65 railway and 187 private locations have provision of off-loading is found in case of overloading beyond permissible carrying capacity.

However, due to the following reasons off-loading is not carried out in every required case:

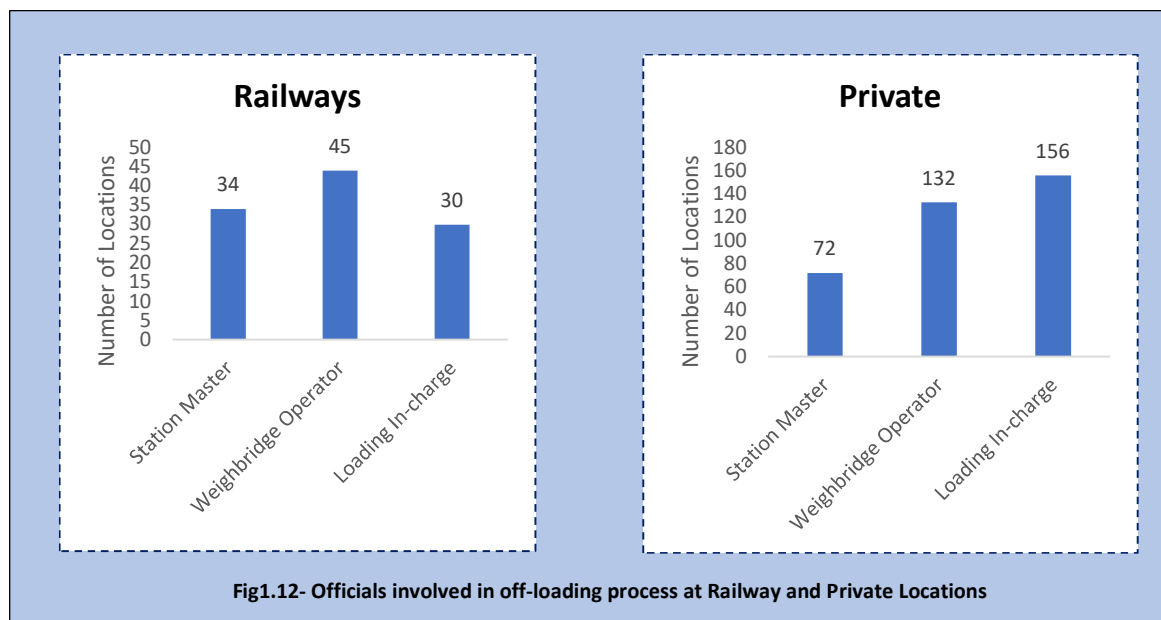

- In-transit- when weighment is done away from source or at destination
- Packed commodity (like iron, steel, etc) which is already pre-weighted

(All details of the locations where there is a provision of off-loading are mentioned in [Annexure-II](#))

**Officials Involvement-** As per the process, when excess weight is manually off-loaded from the wagons it is certified by the railway officials only. During the audit we have checked which officials/departments were responsible at particular weighbridge for off-loading process verification. The following officials are involved in off-loading process:

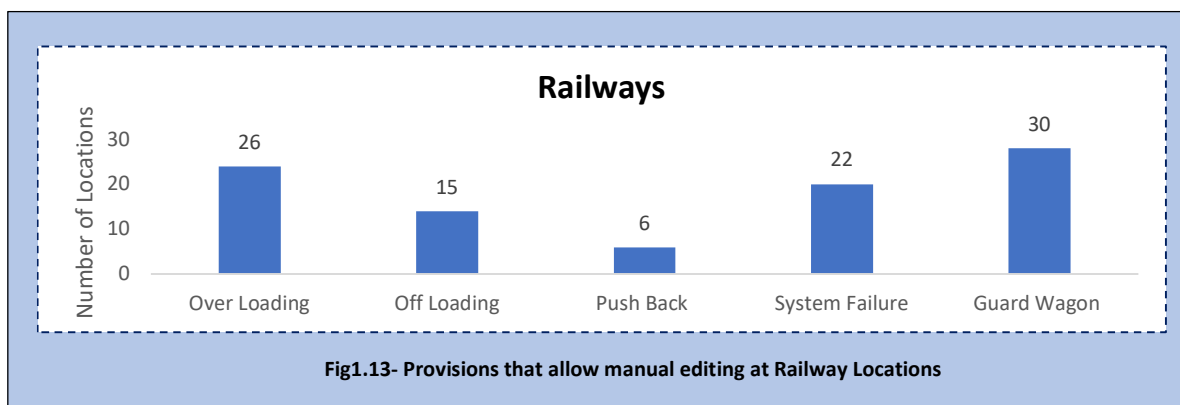

- Station Master
- Weighbridge Operator
- Loading In-charge

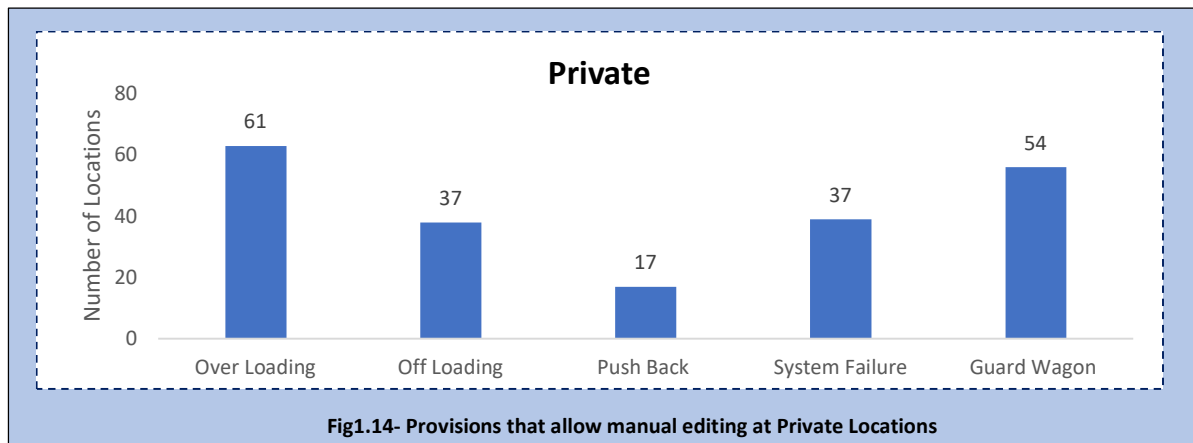

**5.6.2. MANUAL EDITING** - EIMWBs were introduced in the system to ensure minimum manual intervention and automate the weighment process. However, in certain cases OEM and FOIS allow manual intervention and editing of the data captured by the EIMWB. The locations where manual editing is done is mentioned in [Annexure-II](#).

**Provisions for manual editing**-The audit was carried out to identify such cases in which manual editing is allowed and the various provisions at Railways and Private owned EIMWBs are as follows:

- Overloading – In case the wagon is overloaded
- Off-loading – In case excess weight is manually off-loaded from the wagon and certified by official
- Push back – In case rake is pushed back after off-loading/if speed exceeds 15km/h
- System failure – In case there is failure in system and data needs to be entered manually
- Guard wagon – In case of weighment of rake, the weight of guard wagon is also included. However, during generation of RR slip, the weight of guard wagon is manually subtracted.

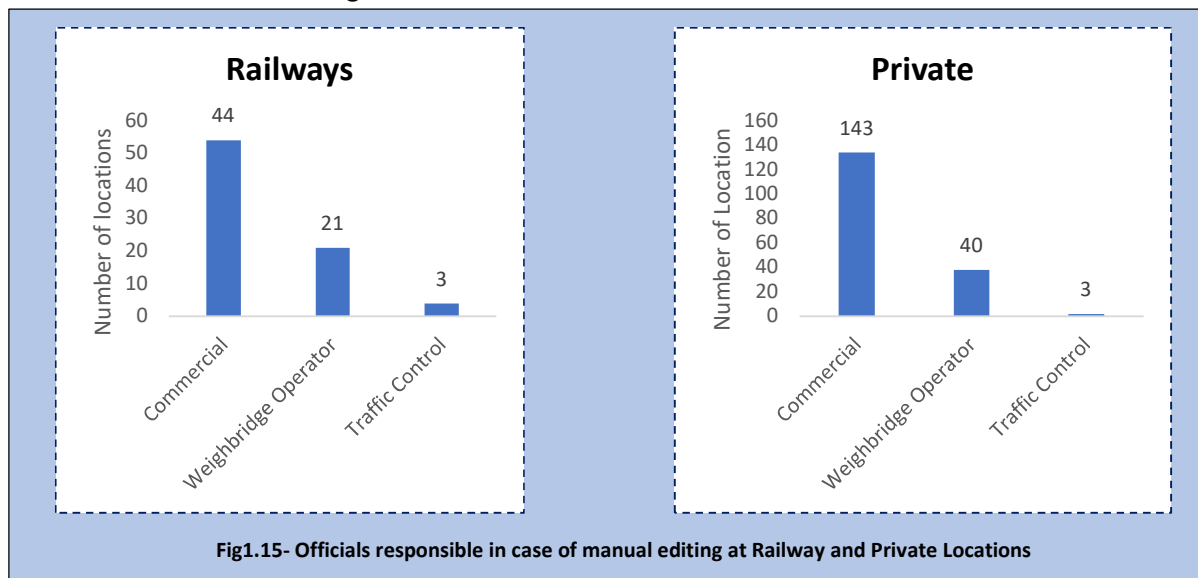

**Officials responsible for manual editing**-The audit was carried out to identify such cases in which manual editing is allowed and officials/departments who are authorised to make such edits. During the audit, we checked the following officials are involved in manual editing process:

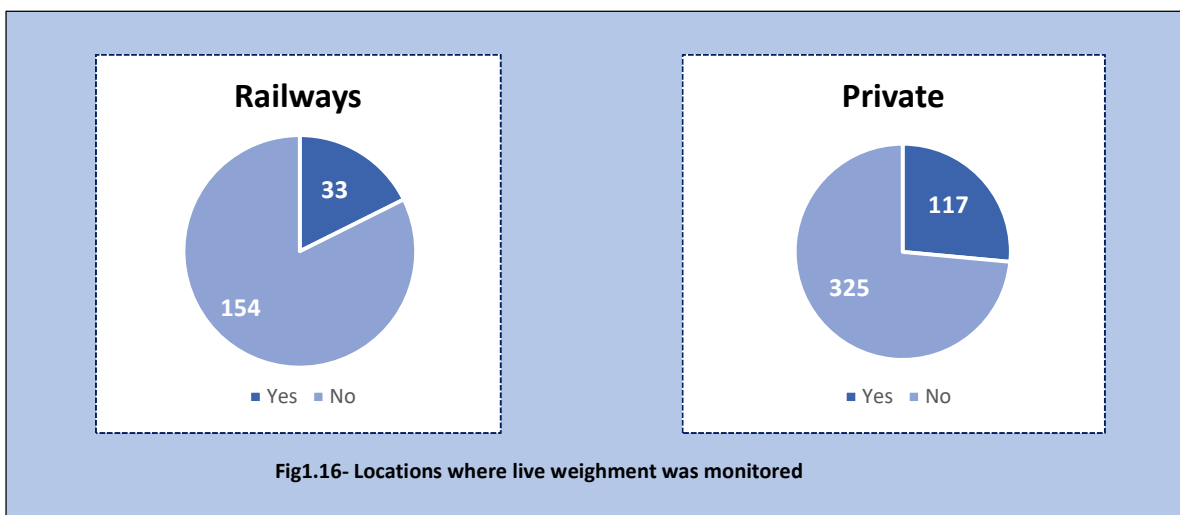

- Commercial
- Weighbridge Operator
- Traffic Control

There are 132 railway locations and 289 private locations where, other than above-mentioned, authorised officials from other departments are involved in the process of manual editing.

**5.6.3. LIVE WEIGHMENT MONITORING**- Live weighment of rakes was monitored to practically help verify entire weighment process. At a total of 150 locations, QCI was able to monitor the live weighment process. During the audit it was observed that:

- The rake was within the permissible speed limit of 15km/hr at 100% of the locations
- Out of 150 locations, overloading was recorded on 55 location which was beyond permissible carrying capacity

We also observed that other procedures were also being followed during the weightment process. However, at some locations, QCI couldn't cover the live weightment of rakes due to the following reasons:

- Rakes weren't scheduled on the day/time of audit
- Weighbridge was temporarily shut down

(All details are annexed as [Annexure II](#))

## 6. OBSERVATIONS/SUGGESTIONS

QCI observed certain best practises during the audit which may be followed at all the EIMWBs to ensure transparency and standardisation of operations.

### 6.1. OVERLOADING

As per the audit, we observed that whenever a wagon is overloaded it may cause damage to the infrastructure of the railways. In order to avoid the damages, there could be a two-fold solution to overloading to ensure that costs may be minimised in such cases:

- Our team observed that there is a provision to carry out off-loading of overloaded wagons at 33% of the total audited locations. Off-loading may be carried out under CCTV surveillance.
- Secondly, consignors who are regularly overloading the wagons may be identified and may be asked for corrective measures.

### 6.2. STANDARD DOCUMENTATION

All divisions should follow a standard operation of procedure and documentation of all the processes and the same should be maintained at the site.

As per the findings of the audit, we suggest that following set of documents should be maintained at the weighbridge premises in a pre-defined format:

- Inspection/Audit Record by Senior Officials
- Breakdown Record
- System Failure Record
- Weighment Record/Rake Log
- Overloading/ off-loading Record
- Maintenance Record of OEM
- Visitor's Log

### 6.3. CALIBRATION RECORD

Our team observed that almost 97% locations had a valid calibration certificate, it helps ensure that the machine is in proper working condition. Additionally, we would suggest that test records may also be maintained with calibration certificates, as it would act as an added feature to this. The image of calibration certificate having test record is attached as [Annexure-III](#).

## 7. CONCLUSION

The interim report analyses the initial parameters of the process audit of EIMWB. A detailed and comprehensive analysis of all the parameters would follow in the final report along with the suggestions for streamlining the on-ground operations.

## ANNEXURE I

### Questionnaire for Process Audit

Question No.	Questions for Process Audit
1	Name of State
2	Location
3	Railway Zone
4	Location No.
5	Location Division
6	Location Name
7	Who has ownership of EIMWB?
8	How many operators are deputed at EIMWB?
9	What is the status of FOIS Integration?
10	When was the FOIS software Integrated?
11	Who has access to OEM software?
12	Which of the following department are involved in operation of the EIMWB?
13	Which of the following records are kept at the Weighbridges premises?
14	How frequently inspections carried out by railway official at EIMWB?
15	How many times did EIMWB break-down from April'21- August'21?
16	How many rakes were weighted in August'21?
17	Is there any provision to restrict access of unauthorized personnel?
18	Which officials are informed in case of an unauthorized person enters into Weighbridge premises?
19	Was there any instance of unauthorized entry in weighbridge premises? (September'20-August'21)
20	Which department officials are authorized to enter weighbridge operating room?
21	Do you have any fire safety policy for weighbridge?
22	Do you have any Quality Manual for operating weighbridges?
23	Do you have any Quality Management System for operating weighbridges?
24	Name of the OEM whose EIMWB is installed at the location?
25	In which year EIMWB was installed at location?
26	What is the capacity of weighbridge? (In Tonne)
27	Is the calibration certificate of EIMWB Valid?
28	Date of calibration certificate of EIMWB?
29	When was the previous calibration of EIMWB done?
30	Calibration certificate for 2019.
31	Calibration certificate for 2020.
32	When is the next calibration of EIMWB due?
33	How many instances were recorded when calibration of EIMWB carried out after due date? (Last 2 years)
34	Is the EIMWB/ Digitizer machine sealed properly?
35	Is the Junction box sealed properly?
36	Are CCTV Camera's available on site?
37	Are CCTV Camera's available inside operator room?

Question No.	Questions for Process Audit
38	Are CCTV Camera's in working condition?
39	Who has access to CCTV live feed?
40	How long the recording of CCTV footage is retained? (Months)
41	Is lighting arrangements available at site?
42	Which of the following Air Conditioner/Cooler is available in weighbridge operating room?
43	What are the mechanisms to safeguard machine/software from external influence?
44	Is any desktop or laptop available other than OEM system?
	If Yes, what it is used for?
45	Can data be transferred from OEM system to other systems?
	If Yes, which of the following can be used to transfer the data?
46	Which officials are authorized to transfer the data in other system?
47	Which department allots rakes for this Weighbridge?
48	How does Weighbridge operator receive the rake allotment information?
49	Are Load Cells at weighbridge clean?
50	Are track switches at weighbridge clean?
51	What data fields are received for rake from FOIS?
52	What operations are performed at EIMWB?
53	What is the maximum speed range allowed for the rake to pass at the EIMWB?
54	What happens if the speed of the rake exceeds the limit?
55	How does rake driver and EIMWB operator keep in touch during weighment?
56	What are the sources for power backup?
57	How many occurrences of computer/system failure recorded in September'20-August'21?
58	Which departments are informed in case of computer/system failure?
59	Is there any provision of off-loading when the rake is overloaded?
	If yes, does re-weighment happen in case of off-loading of rake?
	If Yes, which officials are involved in case of rake off-loading process?
60	At what frequency does off-loading incidents happen at weighbridge in September'20-August'21?
61	How many cases were recorded for off-loading at weighbridge in April'21-August'21?
62	Are client witness allowed at weighbridge?
63	Does client representative witness weighment process?
64	What counter checks adopted to ensure weighment process is fair & transparent?
65	Are there any case of Push-back rake?
66	Have you observed any 4-axle guard wagon?
	Is the weight of 4 axle guard wagon captured by OEM in such cases?
67	How is guard wagon weight adjusted?
68	Which department does manual editing of adjusted weight?

1249976/2022/MECHANICAL(WAGON)

Question No.	Questions for Process Audit
69	Who enters weightment data in FOIS Software?
70	Which provisions allow manual data entries in FOIS software?
71	Which officials are responsible in case of manual entry in FOIS?
72	Which officials are informed in case of over-loading of rake?
73	What procedure is adopted to upload data on FOIS from OEM Software?
74	What mode is used for data sharing?
75	Which service provider is being used?
76	Which of the following department are informed in case of network issue?
77	Which data fields are received from OEM software? (Empty fields not to be marked)
78	Does OEM software allow manual editing of data after weightment?
	If Yes, which official are allowed to change the data?
79	Does FOIS software allow manual editing of data after weightment?
	If Yes, which official are allowed to change the data?
80	Is EIMWB in warranty period?
81	Is there a valid maintenance contract with OEM?
82	What is the validity date of Maintenance Contract?
83	How frequently OEM officials visit at weighbridge as per maintenance contract?
84	How many times maintenance of OEM machine carried out in September'20-August'21?
85	Have you observed instances of weighbridge breakdown in September'20-August'21?
86	For how many days the weighbridge remained non-operational in September'20-August'21?
87	How is above information reported to OEM?
88	What is the response time for service by OEM as per maintenance contract? (Days)
89	Average No. of days utilised by OEM to repair the fault.
90	Additional Observation

Annexure 1.1- Process Audit Questionnaire

### Questionnaire for Live Weighment Monitoring

Question No.	Questions for Live Weighment Monitoring
1	Date of EIMWB Audit.
2	What is the location name at which EIMWB is installed?
3	What is the name of the OEM whose EIMWB is installed at the location?
4	Name of the operator
5	How the rake information received at weighbridge?
6	Which department provides rake details?
7	What is the rake number/id of the rake?
8	Source of the rake.
9	Destination of the rake.
10	Name of the commodity
11	Name of the consignee
12	Name of the consignor
13	Total number of the wagons in the rake.
14	What are the data fields received for empty rake?
15	When was the rake information received?
16	Arrival time of rake at weighbridge?
17	Is the system/machine ready for weighment on time?
18	How the rake driver gets in touch with the operator?
19	Was the rake speed within permissible limit?
20	If not, what happened in such case?
21	How much time is taken to cover weighment process? (In Minute)
22	What is the maximum speed of the wagon at the time of weighment?
23	What is the minimum speed of the wagon during weighment?
24	What is the maximum speed difference between two wagons?
25	Is consignee witness present during the weighment process?
26	Is consignor witness present during the weighment process?
27	Which department officials are present during the process of weighment?
28	How is the data transferred from OEM Software to FOIS Software?
29	Was the rake overloaded?
30	If yes what happened in such case?
31	Which officials were informed in case of overloading?
32	Was the rake pushed back due to overloading?
33	Which data fields are not received in OEM slip after the weighment process?
34	Image of the OEM slip.

1 Out of 60 wagon weight readings, 60 readings are within  $\pm 0.5\%$  of the calibrated weights in both directions. The wagon accuracy is 100% in both directions

2 Out of 12 rake readings obtained 12 readings are within  $\pm 0.25\%$  of actual rake weight in both directions. Therefore the rake accuracy is 100% in both directions

3 Anti Roll back test conducted and passed in both directions
