Sub: Fitment of SS Lavatory Pan  
Ref: Central Railway letter No.M.16B.Chg.Proposal dt. 16.07.2019

Inadequate flushing in toilet pan of coaches continues to be an area of concern. It was decided vide 2000/M(C)/141/8 dt.18.10.2017 that the fish tail design provides inadequate flushing and needs to be upgraded.

In this connection, Central Railway has developed an upgraded design of new stainless steel pan with improved and concealed flushing arrangement. Central Railway has also advised the procedure for fitment of this improvement on ICF coaches with SS inlay as well as those with MS under frame structure.

All Railways are advised to adopt this design for immediate cut in for all coaches under the refurbishment. Railway should invariably provide this design of pan in Utkrisht coaches also.

Copy of Central Railway's methodology for fitment of these pans along with drawings is enclosed. In case of any query, CRSE/Central Railway may be contacted under advice to this office.
